Press release

CY4GATE AND EASYNET GROUP: STRATEGIC PARTNERSHIP TO STRENGTHEN CYBERSECURITY FOR CRITICAL INFRASTRUCTURE AND PROTECT INDUSTRIAL ENVIRONMENTS

EASYNET GROUP BECOMES A CY4GATE PLATINUM PARTNER FOR CY4GARD, THE PLATFORM DESIGNED TO PROTECT IT, OT AND IoT ENVIRONMENTS

Rome/Lecco, 3 November 2026 – Cy4Gate (CY4.MI), a leading Italian and European player in the cybersecurity and cyber intelligence sectors, and Easynet Group, an Italian company specialising in Managed Services, announce a strategic partnership under which Easynet becomes a Platinum Partner of Cy4Gate for CY4GARD, the platform designed to protect critical infrastructure and industrial environments, including by addressing cyber risk management requirements arising from the NIS2 Directive.

The agreement is part of Cy4Gate's growth strategy and will enable industrial companies to benefit from its proprietary CY4GARD technology, complemented by Easynet's expertise in managing IT and OT infrastructures and industrial processes. The partnership aims to promote the adoption of security solutions in complex operational environments, taking into account existing infrastructure and the need to ensure business continuity.

"Our partnership with Easynet is part of Cy4Gate's growth journey and our strategy to expand the reach of our proprietary solutions into new market segments. Working with a partner with an established presence in the industrial sector allows us to strengthen our position in the corporate market and bring our offering closer to businesses' specific needs", said Salvatore Scervo, General Manager of Cy4Gate.

CY4GARD: visibility and active protection across IT, OT and IoT environments

CY4GARD is Cy4Gate's platform dedicated to critical environments, designed to provide infrastructure visibility and active protection across IT, OT and IoT ecosystems. It integrates asset discovery, anomalous behaviour analysis, automated incident response and threat detection capabilities, through a Tactical Edge + Central Hub architecture designed to operate even in environments with limited or intermittent connectivity.

Developed in Italy, the platform is designed to integrate with existing technology infrastructures, including SIEM systems and SOCs already in place. It helps strengthen the security of industrial environments while taking into account the specific operational requirements of different application contexts.

NIS2 and industrial cybersecurity: a growing priority for businesses

The transposition of the European NIS2 Directive into Italian law through Legislative Decree No. 138/2024 has heightened the focus on cybersecurity risk management among organisations falling within its scope. In this context, OT security plays a particularly important role, especially for companies required to protect industrial systems, facilities and production processes while ensuring operational continuity.

Against this backdrop, the combination of CY4GARD and Easynet's Managed Services aims to support businesses in strengthening infrastructure security and addressing operational requirements, leveraging existing technologies and proven hands-on expertise.

Two complementary areas of expertise

The partnership brings together Cy4Gate's technological expertise and Easynet's 30 years of experience in managing IT and OT infrastructures and supporting businesses in the manufacturing sector, including the steel and food industries.

"Through our partnership with Cy4Gate, we are bringing together two leading Italian companies: our in-depth knowledge of customers' processes and infrastructure, and a security technology that stands out in the IT landscape. Together, we are targeting industrial companies and critical infrastructure operators looking to strengthen their security capabilities, also in preparation for the requirements arising from the NIS2 Directive. Our strong roots in Italy's manufacturing sector enable us to understand businesses' real-world needs and support them throughout this journey, while always keeping operational continuity in focus", said Claudio Luigi Rossi, General Manager of Easynet Group.

The partnership also includes Easynet's contribution to the ongoing development of the platform. As a Platinum Partner, Easynet has access to Cy4Gate's development labs and plays an active role in shaping the solution's roadmap, conveying to the technology provider the needs identified in the field and the specific requirements of industrial customers. This collaborative approach aims to translate technological innovation into practical security solutions tailored to the real-world operating conditions of industrial plants and critical infrastructure.

About Cy4Gate S.p.A.
Founded in 2014 to address the growing demand for non-conventional cybersecurity solutions, Cy4Gate S.p.A. was listed on Euronext Growth Milan in June 2020 and subsequently admitted to listing on the Euronext Milan STAR segment in June 2023.
Cy4Gate S.p.A. was established to design, develop and manufacture technologies, products, systems and services capable of meeting the most stringent and advanced Cyber Intelligence and Cybersecurity requirements of law enforcement agencies, armed forces, institutions and businesses, both in Italy and international markets.
As a unique Italian industrial venture, Cy4Gate operates across the entire cyber domain, offering proprietary solutions that address both information gathering and analysis needs and cybersecurity requirements. Its portfolio includes CY4GARD, Hybrid Cyber Range and XTN Cognitive Security Platform in the cybersecurity field, and QUIPO in the cyber intelligence domain.

About Easynet Group
Easynet Group is an Italian Managed Service Provider that has been growing alongside manufacturing companies since 1995, operating in an environment where technology must ensure business continuity. Its strong ties to the industrial sector are also reflected in its ownership structure, which is Italian and rooted in the manufacturing industry.

The Group's offering is built around two main business areas. Managed Services provide ongoing management and protection of networks, cloud infrastructures, cybersecurity and end-user devices. Business Applications support corporate processes through ERP solutions, data analytics, artificial intelligence and Industrial IoT. Over the past two years, Easynet Group has more than doubled its revenues. Today, the Group employs over 270 professionals, holds more than 300 technical certifications and operates from seven locations: Lecco, Como, Monza, Milan, Busto Arsizio, Padova and Lugano.
